RXCamLinkHD is a free mobile application which is specially designed for the DVR and NVR. You can monitor your home, office, supermarket etc. anywhere, anytime.

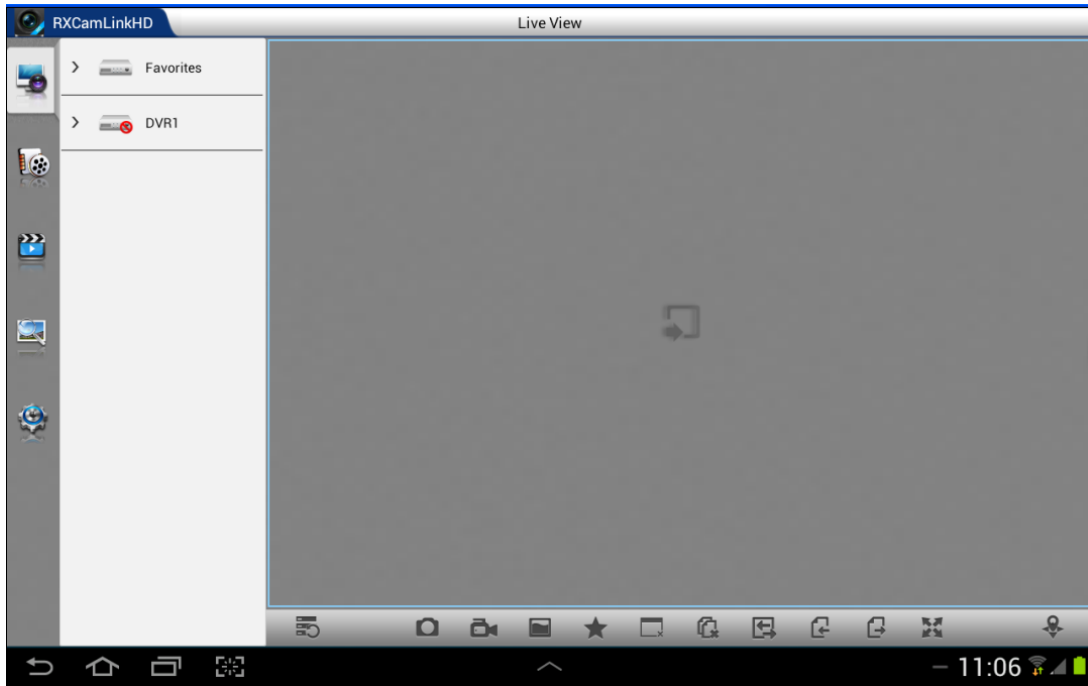

1. Features

Here are the main features of the application:

- Live Audio/Video Streaming of up to 32 Channels
- Remote Search and Playback
- Local Playback
- Image Management
- PTZ Control
- Support Multiple Devices Playback Simultaneously

2. Getting started

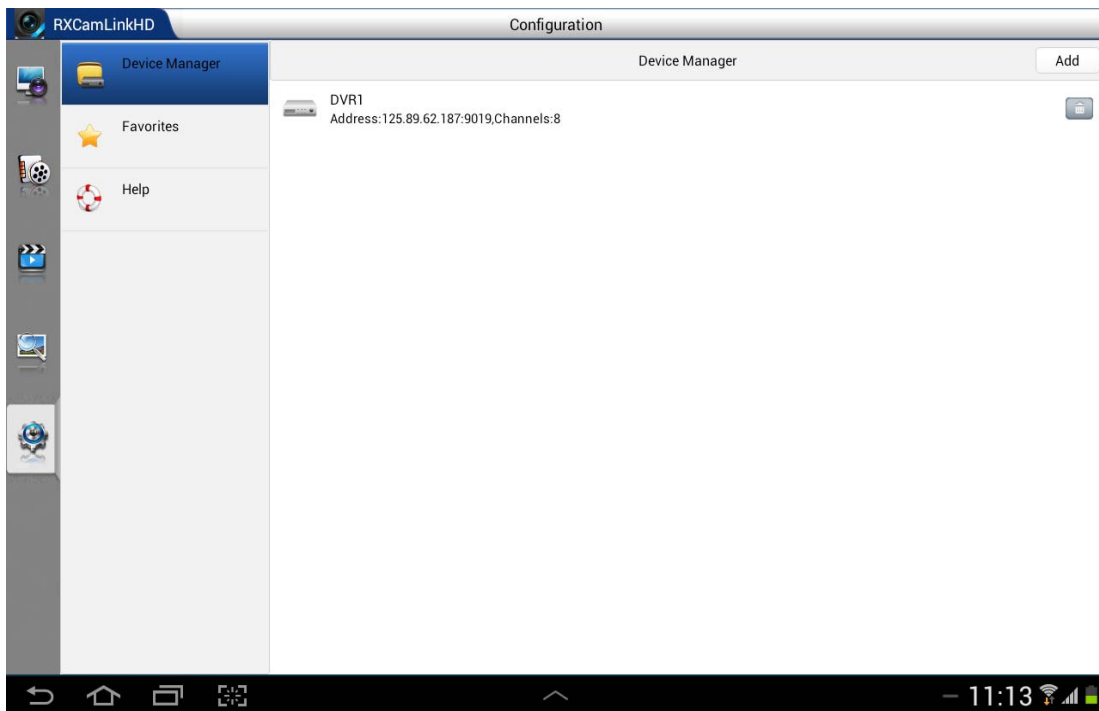

- Setting 3G or WiFi on your iPad or Tablet to connect network.
- Launch application to enter RXCamLinkHD main menu, the default display is live view.

3. Add and delete device

First, click  to open the configure interface, default display device management list, which allows you to add, delete or modify the device information.

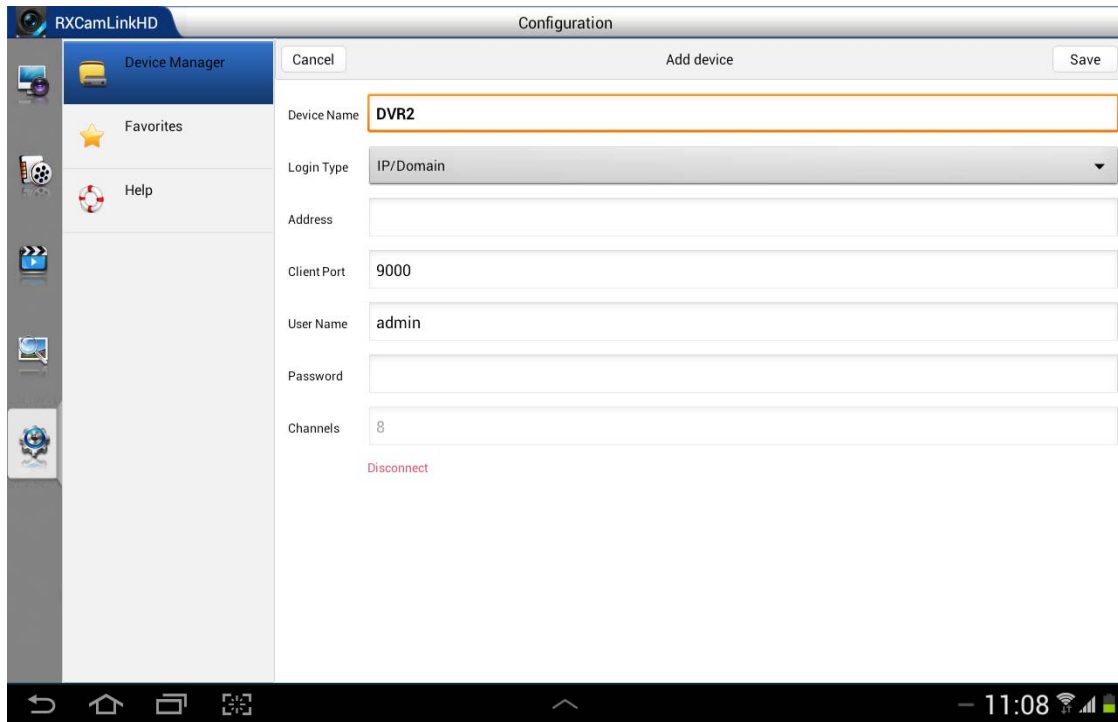

Click the Add button at the up right corner to add device.

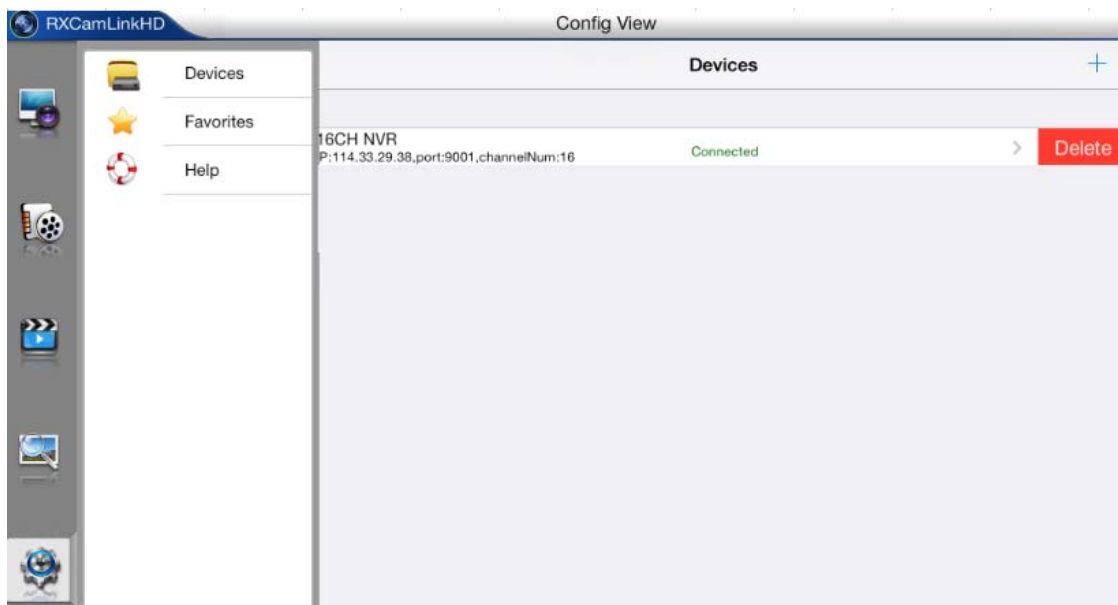

Input the device name, address (IP or domain name)/ID (If your device has a camera,

press the QR code icon  next to Device ID and line up the QR code on the top of the DVR or NVR with the camera on your device.) client port, user name and password etc. The Channels will be retrieved from device automatically.

Click the save button at the up right corner.

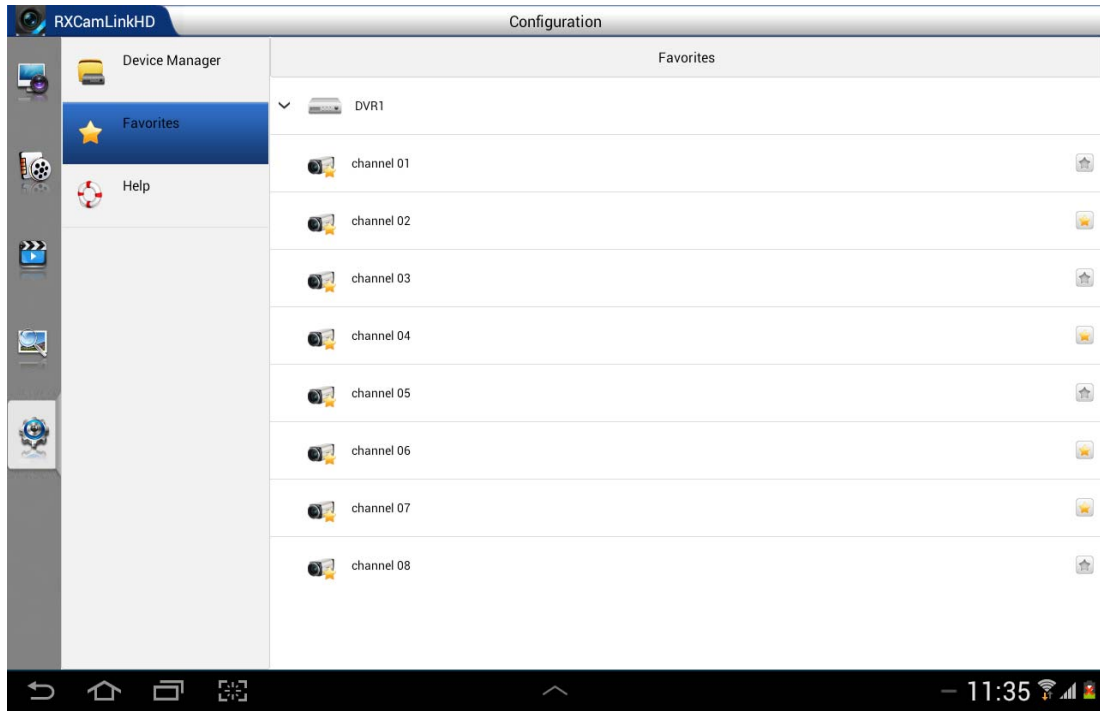

You also can delete the device from the device list.

4. Channel favorite

Click the right side  to add or  to undo channel favorite (Synchronization to the preview and playback channel favorite).

5. Live view

Click  to open live view interface, drag one device or one channel from the left side device list to live view area and start live view.

You can use the tool column to operate the live view channel:

Hide device list

Snapshot

Recording

Switch video stream

Channel favorite

Disconnect/Connect: Tap to disconnect from/connect to the currently selected camera. (Available for Android Tablet. For iPad, it doesn't have this icon, need to drag the camera to the top screen of the device to delete the currently selected camera.)

Full screen play

PTZ control

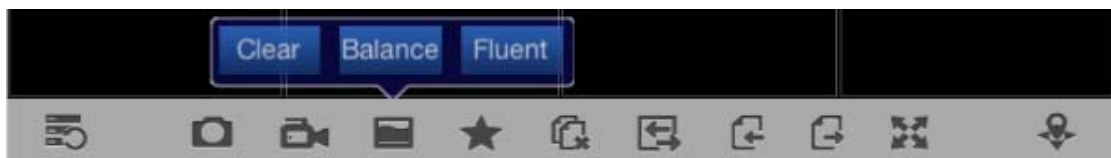

6. Change Video Stream

Select a channel and tap  to change video stream of the selected channel.

Either two options or three options will appear.

NVR: Clear, Balance, Fluent

DVR: Clear, Fluent (iPad); Clear, Balance (Android Tablet)

7. Remote playback

Click  to open remote playback interface. Drag one device or one channel from the list to the playback area and start playback, you can choose the play time from the bar at the bottom of the right side.

Moreover you can click any device at the left side list to launch all the channel, choose one (max 4ch) channel, if there is a dot in the calendar means there is recording in the date, you can choose the date to playback the recording of current date, also you can choose playback synchronous.

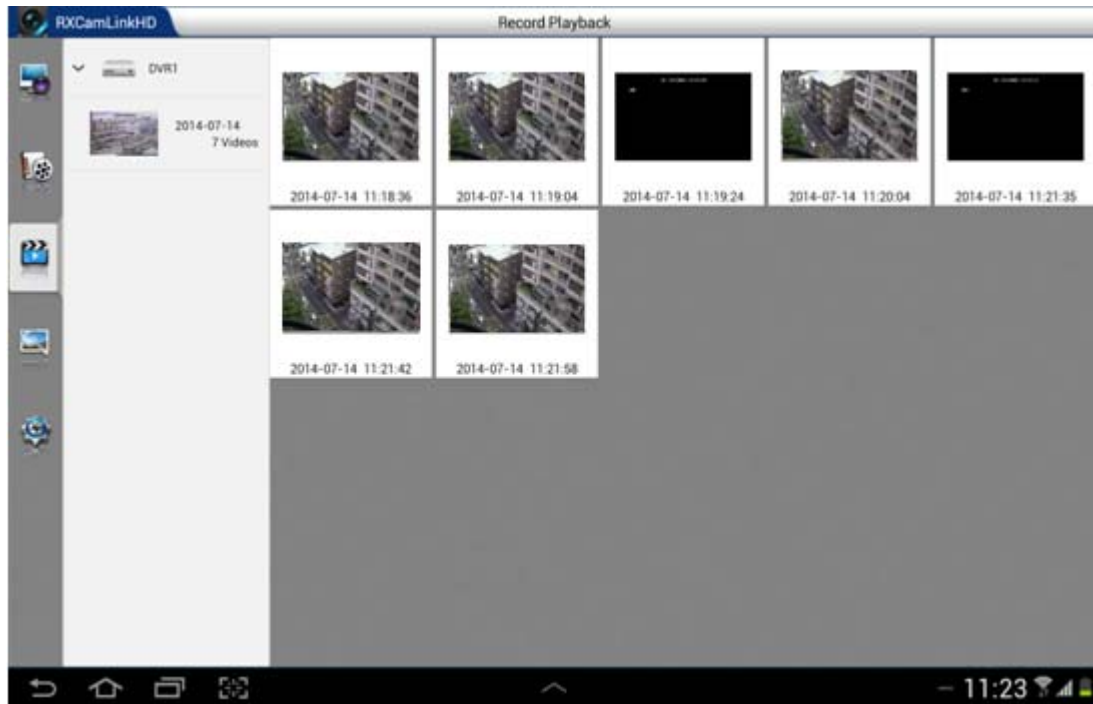

The screenshot displays the RXCamLinkHD Remote Playback interface. On the left, there is a sidebar with a calendar for July 2014, a 'Synchronism' checkbox, and a list of channels (channel 01 to 05). Channel 03 is selected. The main area shows two video feeds: 'DVR1 channel 1' and 'DVR1 channel 3', both displaying a night scene of a building and parking lot. A playback control bar is visible below the feeds, and a timeline at the bottom shows recording periods for the selected date (07/14/2014) from 00:00 to 05:00.

8. Local playback

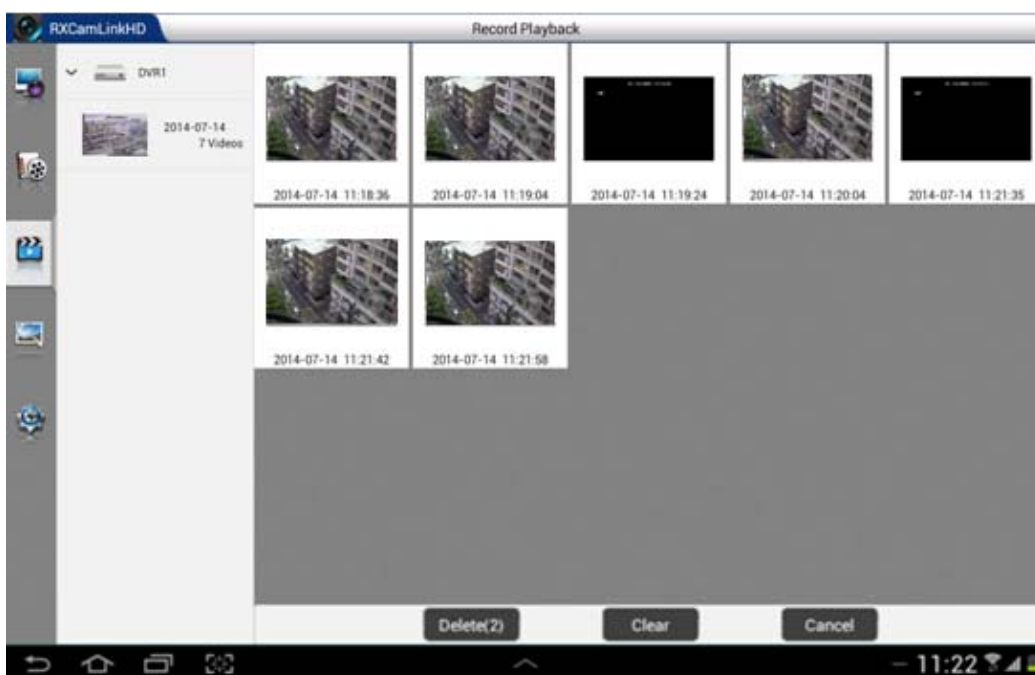

If you already operated channel record in preview or remote playback,

click to open local playback interface, click any device at the left side list to launch all the recording files, then choose the date it will launch all the recording files of current date in the right interface.

Click one file to playback. Long press a video file to delete.

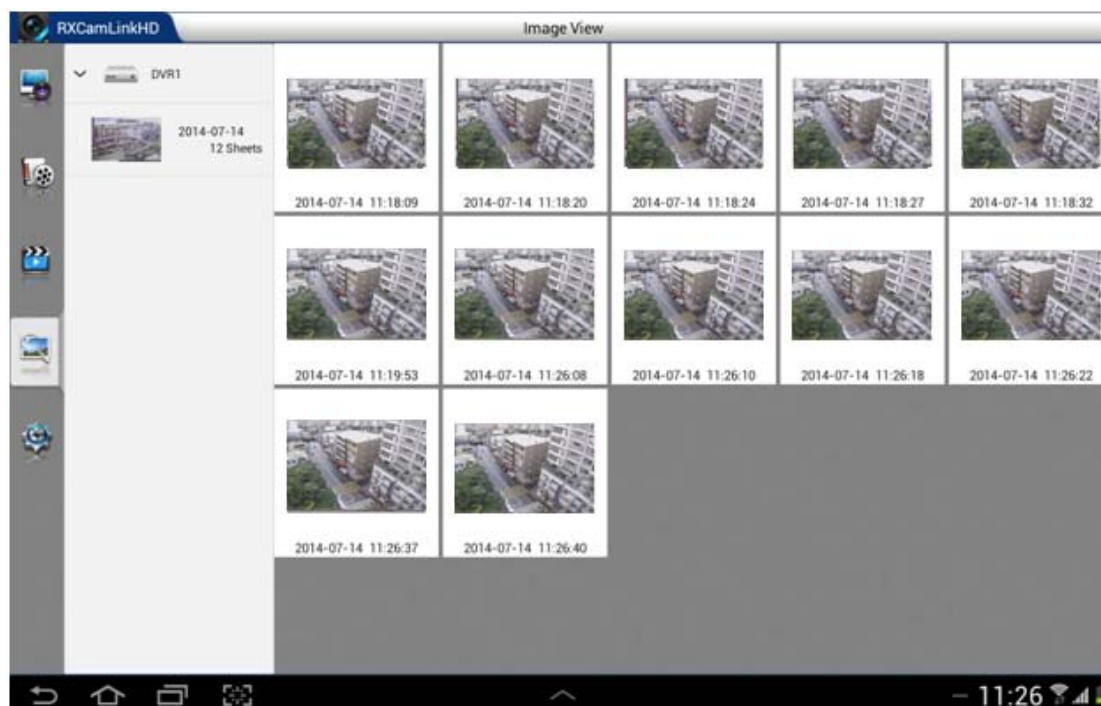

9. Image management

If you already did snapshot operation for the selected channel in preview or playback,

click to open the image management interface, click any device at the left side list to launch all the image information, then choose the date it will launch all images of current date in the right interface.

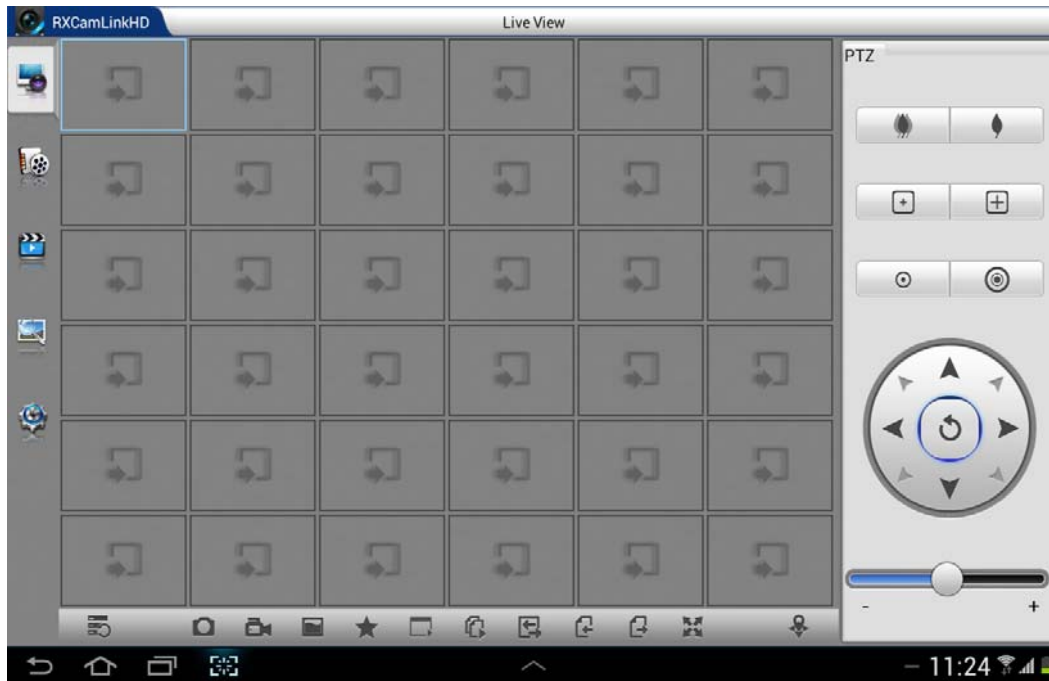

Click one image to view. Long press an image to delete.
